# ACCESSORIES

PCK6 and PCK8 Pre-Construction Kits are color coded to helpfully indicate proper speaker size to ensure installation efficiency and prevent time consuming, costly mistakes. Multiple points to connect the wings guarantee that contact with drywall is always within access. Wings have convenient measurement indications. Each rigid frame is equipped with a joist bracket that allows all speakers to be installed in a perfect line simply and flawlessly. Available by unit or master pack. Sound isolating ABC6, ABC6SST, and ABC8 Acoustic Back Cans connect quickly, simply, and can reduce sound from penetrating adjacent rooms by 24dB. Neodymium magnets ensure a snug fit but screw holes at the extremities of each corner allow the frame to be tightened to the drywall and eliminate any gaps. Stainless steel resists corrosion, micro-perforation grille for the most uniform color, and paintable with an easily removable and replaceable scrim cloth.
